Part A (Page 2)

[Claim 1] A separating knitting yarn carrier pulling apparatus for a knitting machine, of which pulling positions are for standard knitting, coating knitting, and splitting knitting, wherein according to a knitting program, on each step of a knitting process, only by a command from the knitting machine, all knitting yarn carriers can be mutually exchanged from a pulling position for the standard knitting to a pulling position for the coating knitting or the splitting knitting, or vice versa.

[Claim 2] The separating knitting yarn carrier pulling apparatus for a knitting machine of claim 1, wherein, because all of the knitting yarn carriers can deal with the coating knitting, the splitting knitting, and the standard knitting, according to urgency of the knitting program, on each step of the knitting process, only by a command from a knitting machine controller, works can be infinite.
